

Subject: DVD media for Siemens PLM Software product shipments

Commencing in December, 2005, Siemens PLM Software product shipments will utilize DVD media. This change is intended to consolidate installation kits, reducing the number of CDs and improving the installation process. There will be no alternative media option, so a DVD reader is required for software installation. Here are the key points to the program:

1. Depending on the size of the kits, Siemens PLM Software may deliver either DVD or CD media. Smaller kits, patches, etc. that easily fit on a single CD will continue to use that media.
2. Siemens PLM Software also plans to consolidate multiple platform kits onto a single DVD. The consolidation will vary by product line and release, but the intention is to fully utilize the capacity of the DVD.
3. If DVD media is used, there will be no CD option. Due to development effort and production costs, only a single media type will be manufactured.
4. The DVD program will commence with the shipment of NX4, scheduled for December, 2005. Additional product lines such as I-DEAS and Teamcenter will follow in 2006.

Additional details on this program including a FAQ can be found on the GTAC web site at <http://support.ugs.com/DVD>. Please visit the GTAC web site at <http://support.ugs.com> or contact GTAC by phone at 1-800-955-0000 (1-714-952-5444) option 2, 6 if you have any questions or issues with this program.
